Subject: Commercial Solar Installation by Albion Power Co.

To Whom It May Concern:

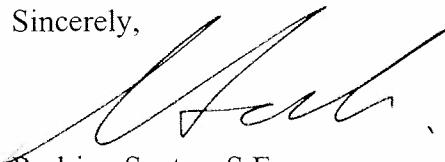

I am delighted to write this letter of recommendation for Albion Power Company. Our structural engineering firm purchased a 12.6 kW photovoltaic system from Albion Power under a design/build contract in 2007. Since that time our system has consistently outperformed its nameplate rating. While this would be good news under any circumstances, for us it is even more significant for the following two reasons: first, our company is located in San Francisco, which is often foggy during the summer months; and second, we opted for a performance based incentive through the California Solar Initiative Program. Under this performance based incentive plan, our system generates a monthly rebate equal to 26 cents for every kWh of clean energy produced. Better performance equals higher rebates!

Our firm has been in business for over 20-years and we have completed over 7000 jobs. We know quality construction work when we see it, and we understand the importance of using licensed C-10 electricians and C-39 roofers. We were impressed with the efficiency and quality of Albion's work, and would feel confident recommending Albion to anyone interested in installing a photovoltaic system. Their staff was knowledgeable and professional throughout every phase of the project.

This solar system was a big investment for our firm, but we felt very strongly that it made an important statement about our commitment to the future. As we anticipate our next twenty years in business, we believe that green building practices, including on site renewable electricity generation, will become standard practice. For us, installing this system was not just an investment in a sustainable world, but a way to strategically position our business for continued success. Albion Power was instrumental in helping us get there.

If you have any questions, please feel free to contact us, we would be happy to talk to you about our experiences.

Sincerely,

Rodrigo Santos, S.E.
