

July 27, 2011

This letter is written to commend the Engineering, Procurement, and Construction services provided by Albion Power Company for the solar tracker installation at Solaria Corporation headquarters, commissioned in April 2011. This project required diligence and flexibility in that it introduced new utility-scale tracker applications for photovoltaic technologies to the U.S. market.

Albion Power Company's design team was professional in making assessments of project needs and developing solutions to suit. Their aptitudes involved electrical design, structural design, navigating building department delays with well-considered code references, and translating European engineering into conventional U.S. NEC, ASAE, and UBC criteria. The drawing set met all industry standards and was comprehensive in making the project a reality.

Albion Power Company's construction team also was flexible and engaged in meeting the needs of our customized solar installation. The scope of work covered in the field included:

- Design and Construction of multiple arrays onto a single Electrical Service Panel
- Design and Construction of Driven Pile Foundations
- Design and Construction of Concrete Foundations
- Design and Construction of Trenching using Underground Conduit and Direct Burial Cable
- Management of Civil Engineering, Geotechnical Engineering, and Landscape Architecture
- Value Engineering for Electrical and Solar Mounting Design
- Utility Coordination and Interconnection

Working through inclement weather and a very aggressive schedule, Albion Power Company met all deadlines and generated an exceptional solar installation.

The teams assembled and managed by Charles Adams have a long history of success in growing the solar industry. He is pragmatic and qualitative in coordinating disparate skill sets towards a common goal.

Albion Power Company's design and construction staff produced an exemplary product at our headquarters. The work is appreciated.

**Scott Skinner**

Senior Mechanical Designer
